EDUCATION

The University of Texas at Austin **Expected May 2028**

Bachelor of Science in Computer Science, Minor in Statistics and Data Science

GPA: 3.76/4.00

Relevant Coursework: Operating Systems, Computer Architecture, Data Structures, Discrete Math, Linear Algebra, Multivariable Calculus, Probability and Statistics, Elements of Data Science

EXPERIENCE

Software Engineering Intern | Family Dollar, Austin, Texas *Sep 2026-Present*

- Prototyping **Gemini**-based computer vision pipeline that detects card skimmers on payment terminals from live CCTV footage with **94%** detection, using **Python**, **Gemini**, **OpenCV**, and the **Orchid VMS API**
- Built automated test harness running parallel, resumable Gemini inspections on recorded frames from **356** stores across **37** states, using **Vertex AI**, **Google ADK**, **Cloud Run**, and **BigQuery**

Software Engineering Intern | RealWork Labs, Austin, Texas *May 2026-Present*

- Automated onboarding for **2,000+** customer accounts, covering business-info collection, privacy-policy verification, and lifecycle email/SMS outreach, using **Firebase**, **TypeScript**, **Twilio**, and **Salesforce**
- Building an AI voice assistant feature that records and transcribes live call handoffs to human reps using **Vapi**, **Twilio**, and **AWS (S3, CloudWatch, Lambda)**

Software Engineering Intern | Teliatry Inc., Richardson, Texas *Apr 2025-Aug 2025*

- Decreased testing time by **60%** for vagus nerve stimulation (VNS) implants used in veterinary care by building an automated **Java**/**C++** test framework supporting **50** dogs/month
- Built **TensorFlow** model predicting blood pressure from pulse signals at **92%** accuracy for implantable oximeters

Research Assistant | UT Dallas Advanced Network Lab, Richardson, Texas *Jun 2023-Aug 2023*

- Authored research paper on maximizing edge-computing network profit with graph-based routing optimization
- Implemented the routing solution in **Python** with heap-based priority queues and dynamic bandwidth allocation

PROJECTS

Nudge (Best Business Award Winner) | *Smart Weight Distribution Mat & Injury Prevention App* *Feb 2026-May 2026*

- Engineered a smart pressure-sensing mat and companion app using **Arduino**, **React**, **Node.js**, **Supabase,** and embedded sensors to track weight distribution and deliver real-time nudges with Texas Convergent
- Programmed **ESP32** firmware in **C++** to scan 16 Velostat sensors through a multiplexer every **500ms** and stream live pressure data to the app over **BLE**, alerting on sustained high pressure

Syntra | *Athlete-Coach Performance & Wellness Platform* *Sep 2025-Dec 2025*

- Built a dual-dashboard health mobile app using **React**, **Node.js**, **MongoDB**, and the **Sahha API** to translate Apple Health data into real-time performance metrics for athletes and coaches with Texas Convergent
- Engineered a **RESTful Express API** with **16** endpoints, embedded **Mongoose** schemas for 9 physiological metrics (HRV, VO2 Max, SpO2, sleep), and **JWT/bcrypt** auth

Pathways (3rd Place out of 46 teams) | WarriorHacks: Education Accessibility Hackathon *Sep 2025*

- Built a scholarship-matching web app in 24 hours with a team of 4, using **Next.js**, **TypeScript**, and **Supabase**, with JWT auth and row-level security, deployed on Vercel
- Designed a weighted-matching algorithm and Inclusivity Index survey ranking scholarships for students

SKILLS

- **Languages**: Python, Java, JavaScript, TypeScript, C, C++, SQL, Swift
- **Cloud & AI**: AWS (S3, CloudWatch, Lambda), Google Cloud (Vertex AI, BigQuery, Cloud Run, Cloud Storage, Gemini), Google ADK, OpenCV, TensorFlow, RESTful APIs, Vapi, Claude Code, Microsoft Copilot Studio
- **Frameworks & Tools**: React, Next.js, Node.js, Supabase, Firebase, MongoDB, Salesforce, Twilio, Git, Arduino
